Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

*The primary reasons for allowance for claims 1-26 are the inclusion of a printing method comprising the steps of generating a candidate pixel array comprising a plurality of N-pixel candidate tiles respectively associated with the N-pixel image tiles, wherein an N-pixel candidate tile includes marked pixels only if the associated N-pixel image tile comprises a portion of a half-toned uniform region and the number of marked pixels in the associated N-pixel image tile is at least a predetermined percentage of N, and wherein the number of marked pixels in some of N-pixel candidate tiles having marked pixels is less than the marked pixels of the associated N-pixel image tile, printing black at pixel locations identified by the black bit-map, and printing non-black color at selected ones of pixel locations identified by the candidate pixel array. It is these limitations either alone or combined as claimed that have not been taught, found, or suggested by prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Art Unit: 2861

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Peters (6,122,407) teaches a method for producing threshold arrays using a candidate pixel that is to be turned on is examined in relation to previous pixels that already exist.
- Hall (5,784,049) teaches a method for digital halftoning provides evenly distributed intensity clusters within a halftone cell. Pixel illumination ordering is determined based on adjacency from a candidate pixel to other pixels already placed in the order of illumination.
- Torpey et al. (6,290,330) teach a method of maintaining black edge enhancement
